

Installeren van de profielen;

Dit gaat in twee stappen, **let op! onderstaande volgorde is belangrijk!**

1. Open Internet Explorer en vul in de adresbalk het IP-adres in van de printer.
Klik op het tabblad "Setup" en kies in de linker kolom voor "Substrate presets management"

The screenshot shows the HP Latex 360 printer's web interface. At the top, it displays the printer's name "HP Latex 360" and its IP address "NPI844AFD / 192.168.139.183". On the right, there is a "Printer status" indicator showing "OP cartridge is low on ink". The main menu has tabs for "Main", "Setup" (which is highlighted in yellow), "Networking", "Customer Involvement Program", and "Support". The left sidebar contains links for Configuration, Printer settings, Security, Internet connection, E-mail server, Notification, Date & Time, Anonymous usage information storage, Maintenance, Printhead Alignment, Firmware update, and Substrate presets management (which is also highlighted in yellow). The central content area is titled "Substrate presets management" and includes "Import" and "Export" buttons. It provides instructions for updating substrate presets, mentioning ".oms" files and a "Kies bestand" button where "0 3M 37-1...ofiler.oms" is selected. A "Update" button is at the bottom right. A question mark icon in the top right corner indicates help.

Klik op het tabblad "Import" - "Kies bestand" en selecteer het gedownload bestand dat de extensie *.oms heeft bijvoorbeeld "0 3M 37-10 SmartProfiler.oms" en klik op "Update".

Nadat de update is voltooid krijg je onderstaande melding en moet je op het bedieningspaneel van de printer "Continue" kiezen.

The screenshot shows the "Substrate presets management status" page. It displays a warning message: "paperpresets.oms: The media profile update file is not signed. Go to the printer's front panel to accept the installation of this package or cancel." There is a red "X" icon next to the message.

2. PrintFactory / ProductionSuite RIP afsluiten en de profielen *.PMM bewaren in de map Calibration;

Windows: C:\Gebruikers\Openbaar\PrintFactory\Calibration
of C:\Gebruikers\Openbaar\ProductionSuite\Calibration

Macintosh: Gebruikers\Gedeeld\PrintFactory\Calibration
of Gebruikers\Gedeeld\ProductionSuite\Calibration

Nadat het materiaal succesvol geïnstalleerd is kun je deze in PrintFactory / ProductionSuite gebruiken.
